***Reasons for Allowance***

1. Claims 1, 2, 4-13, 15-19, 22-37, 39, 40, 42, 44 and 45 are allowed.
2. The following is an examiner's statement of reasons for allowance:

While Marcum (U.S. Patent No. 6,314,337) discloses an automated consolidation station for the assembly of computer systems includes a first conveyor and a second conveyor. A first code reader reads a label on a chassis on the first conveyor. A second code reader reads a label on a tote carrying computer components on the second conveyor. A first signal generated by the first reader is compared with a second signal generated from the second reader to determine if the signals are matched. A device receives an output when the signals are matched and another device senses the position of the tote and the chassis. The output energizes a system to position the chassis and the tote adjacent each other on a single one of the conveyors. Marcum does not disclose the coded data having a plurality of coded data portions provided at respective positions on an interface surface, each coded data portion being indicative of an identity of the component; and other limitations related to these features in combination with the remaining elements and features of the claimed invention.

And Dougherty et al. (U.S. Patent No. 5,943,476) discloses a system for determining position and orientation of a stationary or moving object projects beams of electromagnetic waves, such as light, onto the object. The beams make lines on the object, wherein a camera senses reflections of the lines. The reflections are converted into pixel data which are used to determine the position and orientation of the object relative to a predetermined coordinate system. Dougherty et al. does not disclose a coded data having a plurality of coded data portions provided at respective positions on an interface surface, each coded data portion being indicative

of an identity of the component; and other limitations related to these features in combination with the remaining elements and features of the claimed invention.

The prior art of record fails to teach or fairly suggest to one of ordinary skill in the art at the time of the invention, in conjunction with all the other claimed limitations, a method and system for assembling an object having all the claimed features of applicant's instant invention, specifically including: a coded data having a plurality of coded data portions provided at respective positions on an interface surface, each coded data portion being indicative of an identity of the component, etc., as set forth in the claims.

Also, there is no motivation to combine the Marcum reference with the Dougherty et al. reference to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
